

Conditional pilot: original samples and baseline output

Seven fixed records · local working coordinates (km) · source datum unverified

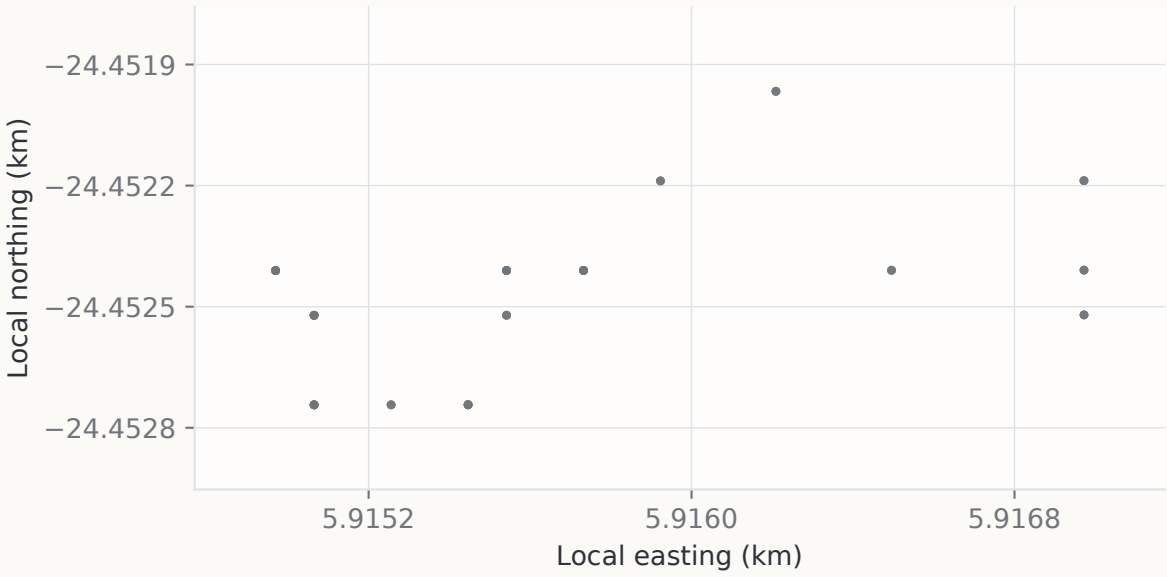

Record 0 | 99 input → 0 clean → 0 retained

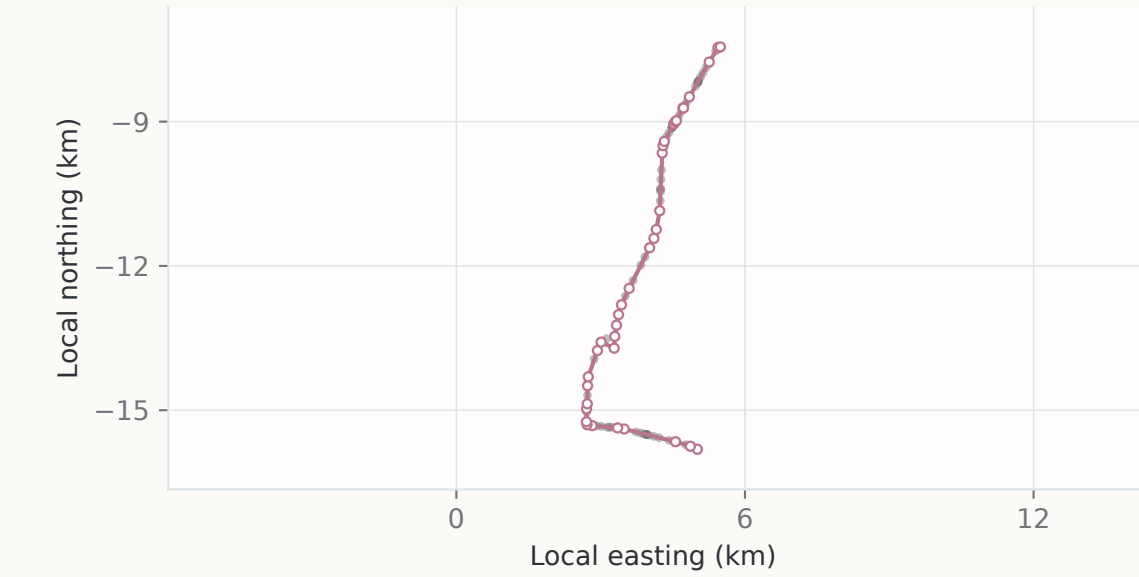

Record 1 | 97 input → 0 clean → 0 retained

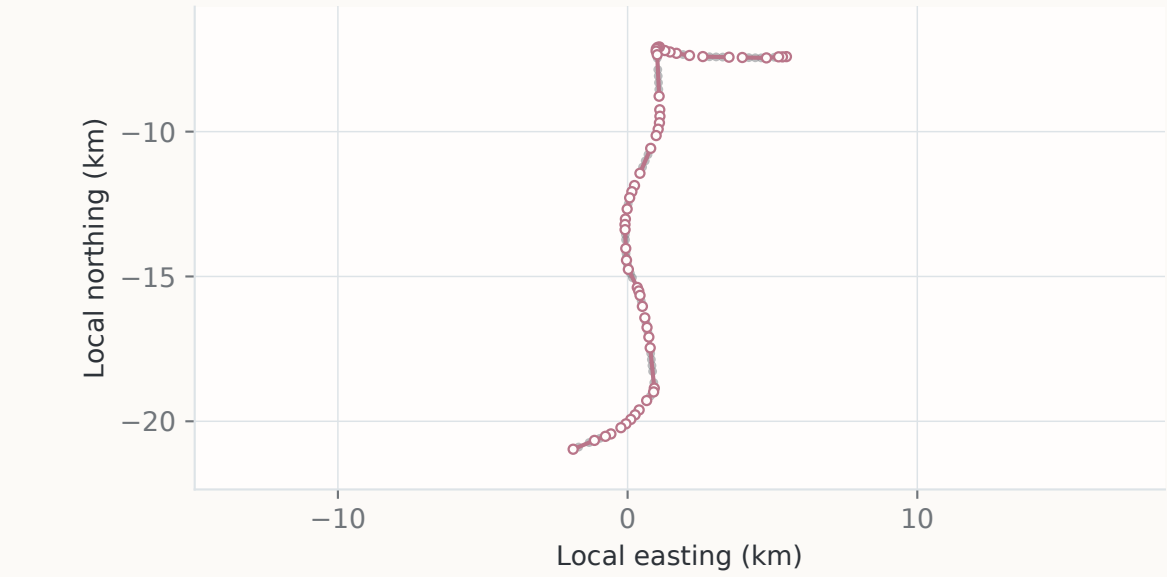

Record 2 | 99 input → 0 clean → 0 retained

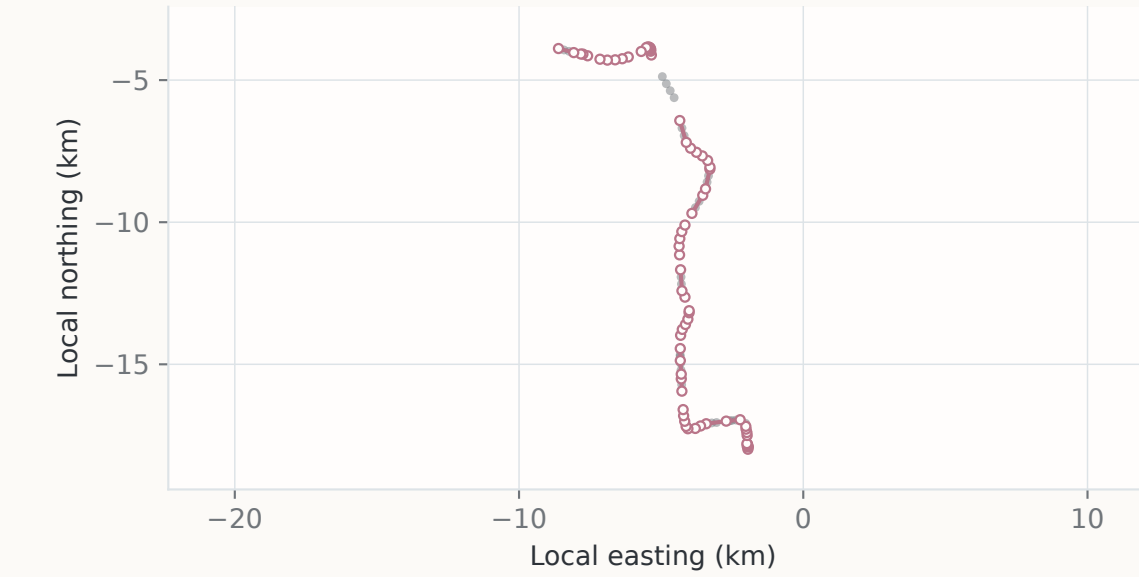

Record 246 | 108 input → 105 clean → 36 retained

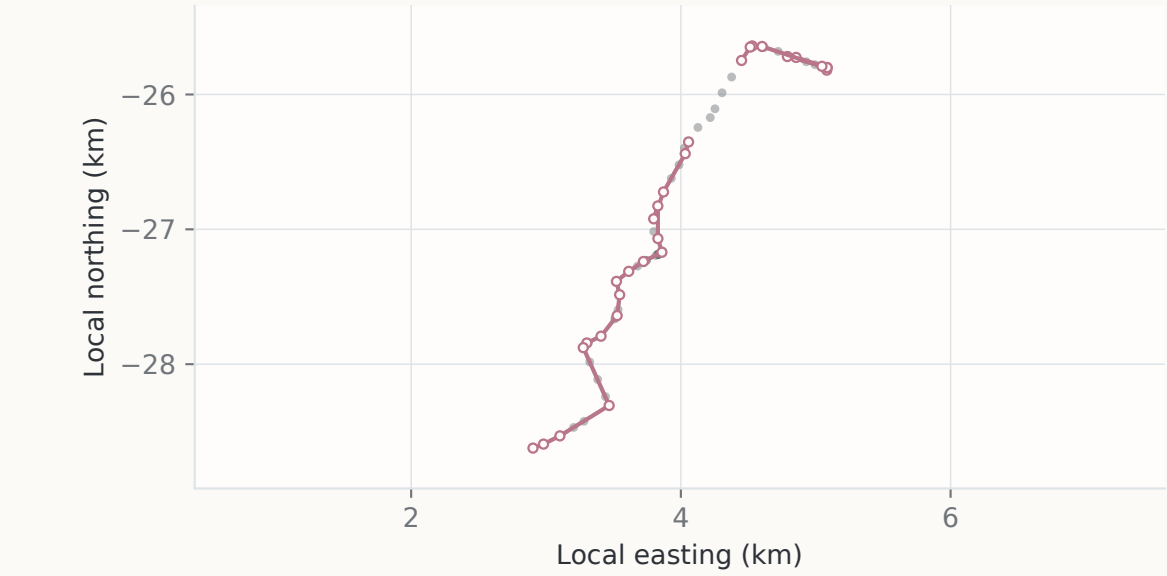

Record 256 | 99 input → 99 clean → 54 retained

Record 306 | 111 input → 105 clean → 69 retained

Record 352 | 170 input → 152 clean → 29 retained

- Original points in working coordinates
- Clean points, within actual segments
- DP output, within actual segments

Raw points are not connected.
Lines never bridge a split or a filtered segment.

Panels use independent limits and equal x/y scale.
Counts describe processing, not accuracy or recovery.
